For more information about the map of science for kids or this exercise, please contact Katy Börner (katy@indiana.edu) or Nikki Roberg (nroberg@indiana.edu) at the School of Library and Information Science, Indiana University, Bloomington, IN.
I want to be an entomologist when I grow up. Then I can study insects all the time.

There are seven main fields of science. They are...

- Social Science
- Mathematics
- Physics
- Chemistry
- Medicine
- Earth Science

I like to study earth science. I want to be an entomologist when I grow up. Then I can study insects all the time. Social science, mathematics, physics, chemistry, earth science, medicine, and psychology. I like to study earth science.

Color earth science green.
Earth scientists study the weather, plants and trees, marine life, insects, and much more.

I like insects. They are interesting to look at and study.

There are many types of insects in the world. Bees, butterflies, and beetles are just a few.

Color in the insect.
